(54) Title: SOURCE CODING ENHANCEMENT USING SPECTRAL-BAND REPLICATION

(57) Abstract

The present invention proposes a new method and apparatus for the enhancement of source coding systems. The invention employs bandwidth reduction (101) prior to or in the encoder (103), followed by spectral-band replication (105) at the decoder (107). This is perceptual quality or an improved perceptual quality at a given bitrate is ffered. The invention is preferably integrated in a hardware or software codec, but can also be implemented as a separate processor in combination with a codec. The invention offers substantial improvements practically independent of codec type and technological progress.
